MATH300 Writing Assignment 2 - Paper Proposal (Due Friday, 2/3)

The goal of this assignment is to write a Paper Proposal describing your chosen topic. A Paper Proposal is the first step to writing a Term Paper. Your proposal should include

- a paragraph telling your instructor a specific reason you are attracted to this topic;
- a brief paragraph related to history of the topic (150-200 words);
- a brief description of your topic and what you already learned about it (for example, what are the objects involved, what are the main theorems about them, etc.) (150-250 words).
- the sources used; at this point, using a Wikipedia article or equivalent as a source is sufficient, but try also list the more serious sources you will use to learn more about your topic.

Use your own language and avoid quotations and citations. Type your text and create a PDF file to submit to Gradescope. Make sure your proposal includes your name and topic.
